CardTrax Programming Information

Bit Format
Facility Code
Start Number

Bit formats	Facility Code Range	Number Range	Prox	Smart
26A (125kHz Standard)	0-255	0-65,535	Y	Y
35X	0-4095	0-1,048,575	Y	Y
35C	0-4095	0-1,048,575	Y	Y
37H	Not Applicable	0-34,359,738,367	Y	Y
37X	0-65,535	0-524,288	Y	Y
40X (13.56MHz Standard)	0-1023	0-268,435,455	N	Y

If no specific request is made, XceedID will assign the first card number as 1001.

Please specify the facility code in the box above. If no FC is specified, XceedID will assign one.

XceedID will assign a customer *CardTrax*™ account number that must be referenced on all credential orders sent to XceedID.

Disclaimers

26A – There is no guarantee of not duplicating cards in this format with other users. Using CardTrax with this format will be for the sole purpose of no duplication of card numbers for the particular end user when produced by XceedID.

35X - This is not a Corporate 1000® format but rather a format created by XceedID that produces the same badge ID and facility code when the controller is set to ignore parity. The default starting card number for this format is 500,001 unless otherwise specified above.
